PROFESSIONAL SUMMARY

Frontend Developer with 3+ years of experience building high-performance, responsive React and Next.js applications for enterprise and B2C products. Strong in TypeScript, Redux, TanStack Query, React Hook Form, component-driven architecture, and REST API integration. Experienced in modernizing legacy jQuery interfaces, implementing lazy loading and code splitting, and delivering scalable user experiences for products used by thousands of users.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

State and Data: Redux, TanStack Query, Context API, REST API Integration

Forms and UI: React Hook Form, Tailwind CSS, Ant Design, shadcn/ui, MUI, Bootstrap

Architecture: Component-driven Architecture, SSR/SSG, Lazy Loading, Code Splitting, Responsive Design

Engineering: Performance Optimization, Git, GitHub, Agile Workflows, Debugging

WORK EXPERIENCE

Frontend Developer - Dadeh Gostar Khat Roshan

2025 - Present

- Migrated legacy jQuery platforms to a decoupled Next.js frontend, improving scalability, maintainability, and long-term development velocity.
- Redesigned responsive UI flows for platforms with 5,000+ daily sessions, improving service discoverability and the overall user experience.
- Implemented lazy loading and code splitting in React and Next.js applications to reduce unnecessary client-side loading and improve page delivery.
- Improved data-heavy forms and API data flows with TanStack Query and React Hook Form, reducing redundant requests and simplifying complex interactions.
- Built reusable, API-driven features for an AI models marketplace and an analytical dashboard used for nationwide data visualization.
- Contributed to AI-powered chatbot platforms for national organizations including Gas Company, Abfa, and Tavanir.

Frontend Developer - Digimark AI

2024

- Developed and maintained responsive B2C interfaces with jQuery and Bootstrap for a product with a large active user base.
- Collaborated with product and design teams to improve UI consistency, usability, and maintainability across real-world user flows.

Frontend Developer Intern - Caspian Oxin

5-month Internship

- Worked on core React.js tasks for active company projects, contributing user-facing features and reusable components within the main frontend workflow.
- Collaborated with the development team to implement assigned product requirements and resolve frontend issues.

PROJECTS

NWW - Abfa National Services Portal app.nww.ir

- Developed and maintain key frontend features for the unified national services portal of the Abfa (Water and Wastewater) organization, a live production platform used by users nationwide.
- Delivered responsive, API-driven interfaces and forms as part of the company's national digital services initiative.

Narvan - Gas Company Analytical Dashboard narvan.ai

- Built reusable, API-driven features for a nationwide analytical dashboard used for gas industry data visualization.
- Implemented data-heavy UI components and optimized data flows to support large-scale, real-time reporting.

UniCo - Startup Platform uni-co.ir

- Developed and actively maintain a live React and TypeScript platform serving 1,400+ active users, with scalable frontend architecture, server-state workflows, and complex forms.
- Continuously improved features, responsive UI, and performance based on real user behavior and feedback.

Selected UI Projects

- Portfolio work including an Online Shop e-commerce application and a Digikala homepage UI recreation.

EDUCATION

B.Sc. in Computer Engineering - University of Isfahan

2022 - Present
